

3. Below is the function $f(x) = -x^2 + 9$

(a) Using the grid, approximate the area under the curve with increasing accuracy

(b) Find the true value of the area under the curve by computing $\int_{-3}^3 (-x^2 + 9) dx$

4. Derive: $x = x_0 + v_i t + \frac{1}{2}at^2$
